PRIYANSH REDDY ALETI

AI ENGINEERING | PYTHON & FULL-STACK APPLICATIONS

Dubai, UAE | +971 50 920 9395 | priyanshaleti@gmail.com

linkedin.com/in/priyansh-aleti | github.com/priyansh8341

Software engineer with two years of professional delivery experience, building Python applications, interactive systems and LLM workflows. Delivered event-registration and media platforms; developed AI analytics and operations applications with typed plans, evidence checks and human-controlled actions.

TECHNICAL SKILLS

Languages & applications: Python, TypeScript, JavaScript, SQL, React, HTML/CSS, C#, Unity

Backend & data: FastAPI, REST APIs, Pydantic, SQLAlchemy, DuckDB, MySQL, SQLite, Git

AI engineering: LLM integration, tool calling, BM25 retrieval, structured outputs, evaluation, Ollama, ComfyUI; AI-assisted development with Codex

DELIVERED APPLICATIONS

EJADA | Event Registration & Activation Platform

Python, MySQL, JavaScript, Hostinger, Google Drive

- Independently built a registration and activation-management platform for approximately five event activations, integrating separately developed photobooth and Glambot applications.
- Connected QR check-ins and activity completion to raffle eligibility, email/WhatsApp confirmations and media delivery; built a display application that refreshed photos and videos from Google Drive.

Etihad | AI Photobooth & Destination Experiences

- Developed ComfyUI facial-transformation workflows for an AI photobooth, plus a separate application compositing participant cut-outs onto changing destination backgrounds.

AI ENGINEERING PROJECTS

QueryCraft | AI Analytics & Natural-Language-to-SQL

Python, FastAPI, DuckDB, React, TypeScript, SQLGlot, Ollama | Local application; AI-assisted development

- Built an analytics workspace with CSV ingestion, schema inspection, natural-language queries, interactive charts, persistent history and CSV/JSON analysis exports.
- Compiled typed model intents into SQL for full-quarter comparisons and CSV aggregation; enforced source scope, read-only execution, query limits and inspectable traces.
- Checked 32 developer-authored regression cases across synthetic commerce and public weather data; verified calculations with independent Python references and preserved failed experiments.

EventOps | AI Operations Investigation & Recovery

Python, FastAPI, React, TypeScript, SQLAlchemy, SQLite, Ollama | Local prototype

- Connected an LLM investigator to scoped read-only tools and BM25 retrieval over versioned playbooks; checked findings against queue records, retry history and delivery evidence.
- Required staff approval before simulated recovery, with expiring evidence snapshots, idempotent requests and verification through new attempts and receipts.

AegisAI | Validated LLM Decision Review

Python, FastAPI, Pydantic, SQLite, JavaScript, Ollama | Local prototype

- Built schema-constrained LLM generation, independent Pydantic validation and human review history; disabled a same-model reviewer after evaluation exposed seven missed errors.

PROFESSIONAL EXPERIENCE

Interactive Systems Engineer | Enginious Technologies | Aug 2024 - Sep 2026

- Delivered Unity/C# interactive applications connecting hardware inputs, live interfaces and digital content; implemented encoder-based synchronisation and TUIO object tracking.
- Diagnosed timing, calibration and live-user issues with engineering, design and operations teams during application delivery and operation.

EDUCATION

BE, Computer Science | BITS Pilani, Dubai Campus | 2021 - 2025
